## Philips Avent twin electric breast pump

Philips Avent is dedicated to helping mothers breastfeed for longer, because it is proven that breast milk is vitally important for healthy infant development

**Research based product development.** We have collaborated with leading scientists and healthcare professionals for over 25 years and conducted research with more than 15,000 mothers worldwide.

**What makes this breast pump unique?** Recent studies have proven a clear correlation between comfort and milk flow during expressing. Relaxed mothers feel more comfortable and express significantly more milk more easily. Independent research also confirms that infant suckling is a synergistic combination of breast compression and intra-oral vacuum, originating from the peristaltic action of the infant's tongue. The Philips Avent Comfort breast pump is based on exactly these insights.

### Unique, natural expressing position

The breast pump has a unique breast shield design. Mothers can sit in a comfortable position when expressing, with no need to lean forward yet milk still flows directly into the container. This improved position helps mothers feel more comfortable and, as a result, express more milk, naturally.

91% of mothers (strongly) agreed that being comfortable when expressing is important for good milk flow.\*

### Clinically proven to be effective

The breast pump mimics the infant's natural peristaltic suckling behaviour by combining breast compression with gentle suction. It features our clinically proven massage cushion with soft petals that gently compress the breast to stimulate milk flow. This innovative cushion has a distinctive, velvety texture that feels warm on the breast, further helping mothers to relax whilst expressing. The removable cushion also prevents milk pooling, aiding hygiene and eliminating the risk of lost milk. In addition, simultaneous pumping at both breasts is proven more efficient and may even boost the ability to produce breast milk.\*\*

86% of mothers were (very) satisfied with the effectiveness of the breast pump.\*

### Simple settings

When switched on, the pump automatically starts in gentle stimulation mode to help trigger let down. Then the mother can choose between 3 choose pumping settings to make milk flow most comfortable and effective for her. 96% of mothers (strongly) agreed that this breast pump is easy to use.\*

\*Independent home placement test among 76 mothers in the US, August 2012

\*\*A randomised controlled trial to compare methods of milk expression after preterm delivery. Jones et al ADC 2001;85:F91)

Philips Avent provides the best start to set the stage for healthy futures

For healthcare professionals

## Product components

Comfort breast pump	Specifications	Benefits
<b>Pumping mode</b>	Double electric	Effortless expressing at the touch of a button. More milk in less time – the perfect time saver for mothers.**
